

# Wind Update

Beyond Static Networks  
To Consider Time and Space

*or*

*Putting People Central in  
Network Design and  
Keeping Them In Control*

Wind is to Mesh  
as the  
Web is to WAN

CENTRALIZED  
(A)

DECENTRALIZED  
(B)

DISTRIBUTED  
(C)

Paul Baran 1962

## CENTRALIZED OVER TIME

Time  $X_0$

Time  $X_1$

Time  $X_N$

## CENTRALIZED OVER TIME AND MOTION

Time  $X_0$

Place  $Y_0$

Time  $X_1$

Place  $Y_1$

Time  $X_N$

Place  $Y_N$

**DECENTRALIZED WITH CHANGE FROM  
HUB TO SPOKE TO HUB  
OVER TIME AND PLACE**

**Static**

# DISTRIBUTED NETWORKS STATIC VERSUS OVER TIME AND SPACE

**Static**

Wind is a kind of network that is shaped  
by the movements and interaction of  
people through time and space

There is no expectation of any  
centralized, static infrastructure

Wind requires no permissions by  
authorities or roll out of infrastructure

So, how could Wind work in real life?

Cuba's El **Paquete** Semanal "The Weekly Package"

THE GRIFFEY-NET aka <http://librarybox.us/>

## MIT Study of Airports and Infectious Disease 2012

<https://scientificearthconscientious6.wordpress.com/2012/07/24/1894new-model-of-disease-contagion-ranks-u-s-airports-in-terms-of-their-spreading-influence-airports-in-new-york-los-angeles-and-honolulu-are-judged-likeliest-to-play-a-significant-role-in-the-grow/>

The quality of a Wind network is dependent on the number of nodes connected over time and space, the density of nodes, and how their velocity and bearing is changing

Where to from here?

- Hold many, many more workshops and simulation events
- Considering the cultural, economic, gender aspects on network quality, equality, sustainability, hostility
- Begin to implement basic protocols for discovery & publishing
- Publish design documents and patterns to help tool developers consider all the things they should be considering
